

ABSTRACT OF THE DISCLOSURE

An object of the present invention is to provide a data supplying method that can simply arrange photographing data together with supplementary information and a portable terminal unit used in the method and a data supplying apparatus.

The photographing data, such as an image photographed by a portable terminal in a move destination is sent to the data supplying apparatus together with the supplementary information, such as store data and map data. The data supplying apparatus supplies movement trail data created by combining the photographing data and the supplementary information to a terminal on the user side.
